

Biohazard Safety

- ✘ Avoid direct contact with sewage. Use liquid-proof gloves, boots, and face protection if you will have direct contact with raw sewage. Use a face shield if you might get splashed.
- ✘ Wash your hands well to prevent spreading contaminants. Clean, treat, and report any cuts or wounds immediately, because they could be infected.
- ✘ Keep contaminated gloves, boots, face protection, and other equipment away from areas where food is eaten or stored.
